| 12  | V SYNC          | Vertical Sync.      | Low    | 37  | GND    | Ground   |  |
| 13  | GND             |                     |        | 38  | B7     |          |  |
| 14  | DE              | Data Enable         |        | 39  | B6     |          |  |
| 15  | GND             |                     |        | 40  | B5     |          |  |
| 16  | DCLK            | Dot Clock           |        | 41  | B4     |          |  |
| 17  | GND             | Ground              |        | 42  | GND    | Ground   |  |
| 18  | R7              |                     |        | 43  | B3     |          |  |
| 19  | R6              | Red Data (R7 :MSB)  |        | 44  | B2     |          |  |
| 20  | R5              |                     |        | 45  | B1     |          |  |
| 21  | R4              |                     |        | 46  | B0     |          |  |
| 22  | GND             | Ground              |        | 47  | GND    | Ground   |  |
| 23  | R3              |                     |        | 48  | GND    | Ground   |  |
| 24  | R2              | Red Data            |        | 49  | NC     |          |  |
| 25  | R1              |                     |        | 50  | NC     |          |  |

CN1 (50P) connector: Compatible with P-Two AF7501-N2G1Z

### 2. Absolute maximum ratings

(GND = 0 V)

| Parameter             | Symbol          | Values |                      | Unit            | Remark  |
|-----------------------|-----------------|--------|----------------------|-----------------|---------|
|                       |                 | Min.   | Max.                 |                 |         |
| Power voltage         | V <sub>CC</sub> | -0.3   | 5.5                  | V <sub>DC</sub> | At 25°C |
| Input signal voltage  | V <sub>LH</sub> | -0.3   | V <sub>CC</sub> +0.3 | V <sub>DC</sub> | At 25°C |
| Operating temperature | T <sub>OP</sub> | 0      | +50                  | °C              | Note 1  |
| Storage temperature   | T <sub>ST</sub> | -20    | +70                  | °C              | Note 1  |

Note 1: The relative humidity must not exceed 90% non-condensing at temperatures of 40°C or less. At temperatures greater than 40°C, the wet bulb temperature must not exceed 39°C. When operate at low temperatures, the brightness of CCFL will drop and the lifetime of CCFL will be reduced.

Note 2: The unit should not be exposed to corrosive chemicals.

### 3. Electrical characteristics

#### a. Typical operating conditions

| Item                 | Symbol              | Min.              | Typ. | Max. | Unit | Remark |
|----------------------|---------------------|-------------------|------|------|------|--------|
| Power supply voltage | Input voltage       | V <sub>CC</sub>   | 4.75 | 5.0  | 5.25 | V      |
|                      | Current consumption | I <sub>A</sub>    | -    | 0.8  | 1.0  | Arms   |
|                      | Inrush current      | I <sub>RUSH</sub> | -    | -    | 1.5  | Apeak  |
| Internal logic       | Low voltage         | V <sub>IL</sub>   | 0    | -    | 1.0  | V      |
|                      | High voltage        | V <sub>IH</sub>   | 2.3  | -    | 3.3  | V      |
| Power ripple voltage |                     | V <sub>RP</sub>   | -    | -    | 100  | mVp-p  |

Note 1: Effective value (mArms) at V<sub>CC</sub> = 5 V/25°C.

Note 2: Refer to the following power-on condition.

Sequence of Power-on/off and signal-on/off

Apply the lamp voltage within the LCD operating range. When the backlight turns on before the LCD operation or the LCD turns off before the backlight turns off, the display may momentarily become abnormal.

#### Caution

The above on/off sequence should be applied to avoid abnormal function in the display.

In case of handling:

Make sure to turn off the power when you plug the cable into the input connector or pull the cable out of the connector.

## b. Display color v.s. input data signals

| Display colors  |             | Data signal (0 : Low level, 1: High level) |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |
|-----------------|-------------|--|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|
|                 |             | R7   | R6 | R5 | R4 | R3 | R2 | R1 | R0 | G7 | G6 | G5 | G4 | G3 | G2 | G1 | G0 | B7 | B6 | B5 | B4 | B3 | B2 | B1 |
| Basic colors    | Black       | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  |
|                 | Blue        | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 1  | 1  | 1  | 1  | 1  | 1  | 1  |

Note: Each basic color can be displayed in 256 gray scales using the 8 bit data signals. By combining the 24-bit data signals(R, G, B), the 16777216 colors can be achieved on the display.

## c. Input signal timing

Timing diagrams of input signal are shown in Fig 2.

## (1). Timing characteristics of input signals

DE mode

| Item                      | Symbol | Min. | Typ. | Max. | Unit | Remark |
|---------------------------|--------|------|------|------|------|--------|
| Clock frequency           | Fck    | 38   | 40   | 50   | MHz  |        |
| Horizontal blanking       | Thb1   | 235  | 256  | 500  | Clk  |        |
| Horizontal display period | Thd    | -    | 800  | -    | Clk  |        |
| Horizontal sync. period   | Th     | 1035 | 1056 | 1300 | Clk  |        |
| Vertical frequency        | -      | 46   | 60   | 76   | Hz   |        |
| Vertical blanking         | Tvb1   | 10   | 28   | 150  | Th   |        |
| Vertical display width    | Tvd    | -    | 600  | -    | Th   |        |
| Vertical sync. period     | Tv     | 610  | 628  | 750  | Th   |        |

H/V mode

| Item                      | Symbol  | Min. | Typ. | Max.    | Unit | Remark |
|---------------------------|---------|------|------|---------|------|--------|
| Clock frequency           | Fck     | 38   | 40   | 50      | MHz  |        |
| Horizontal display period | Thd     | 1030 | 1056 | 1300    | Clk  |        |
| Hsync pulse width         | Thw     | 5    | 128  | -       | Clk  |        |
| Hsync front porch         | Thf     | 10   | 40   | -       | Clk  |        |
| Hsync back porch          | Thb     | 8    | 88   | -       | Clk  |        |
| Hsync width+back porch    | Thw+Thb | 80   | -    | Thd-810 | Clk  |        |
| Hsync blanking            | Thb1    | 230  | 256  | 500-    | Clk  |        |
| Vsync period              | Tv      | 610  | 628  | 650     | Th   |        |
| Vsync width               | Tvw     | 2    | 4    | -       | Th   |        |
| Vsync front porch         | Tvf     | 0    | 1    | -       | Th   |        |
| Vsync blanking            | Tvb1    | 10   | 28   | 50      | Th   |        |
| Hsync/Vsync phase shift   | Tvpd    | 2    | 320  | -       | Clk  |        |

| Item                     | Symbol | Value | Unit | Description   |
|--------------------------|--------|-------|------|---|
| Horizontal display start | The    | 218   | Clk  | After falling edge of Hsync, counting 218 clk, then getting valid data from 219th clk's data. |
| Vertical display start   | Tve    | 25    | Th   | After falling edge of Vsync, counting 25 Th, then getting 26th Th's data.                     |

Note 1:Clock falling edge latch the data.

Note 2:H/V is negative polarity.

## d. Display position

| D( 1,600 ) | D( 2,600 ) | ..... | D( X,600 ) | ..... | D( 799,600 ) | D( 800,600 ) |

## e. Backlight unit

The backlight system is an edge-lighting type with a CCFT(Cold Cathode Fluorescent Tube).

The characteristics of a single lamp are shown in the following tables.

| Parameter             | Symbol         | Min.  | Typ.  | Max.         | Unit  | Remark    |
|-----------------------|----------------|-------|-------|--------------|-------|-----------|
| Lamp voltage          | V <sub>L</sub> | 720   | 800   | 880          | Vrms  | Note 1    |
| Lamp current          | I <sub>L</sub> | 4     | 5.5   | 7            | mArms | Note 1    |
| Power consumption     | P <sub>L</sub> | -     | 4.4x6 | -            | W     | Note 2    |
| Lamp starting voltage | V <sub>S</sub> | -     | -     | 1500(T=0°C)  | Vrms  | Note 3    |
|                       |                | -     | -     | 1150(T=25°C) |       |           |
| Frequency             | F <sub>L</sub> | 40    | 52    | 60           | KHz   | Note 4    |
| Lamp life time        | L <sub>L</sub> | 50000 | -     | -            | Hr    | Note 1, 5 |

Note 1: T= 25°C

Note 2: Inverter should be designed with the characteristic of lamp. When you are designing the inverter, the output voltage of the inverter should comply with the following conditions.

- (1). The area under the positive and negative cycles of the waveform of the lamp current and lamp voltage should be area symmetric (the symmetric ratio should be larger than 90%).
- (2). There should not be any spikes in the waveform.
- (3). The waveform should be sine wave as possible.
- (4). Lamp current should not exceed the maximum value within the operating temperature (It is prohibited to over the maximum lamp current even if operated in the non-guaranteed temperature). When lamp current over the maximum value for a long time, it may cause fire. Therefore, it is recommend that the inverter should have the current limited circuit.

Note 3: The inverter open voltage should be designed larger than the lamp starting voltage at T=0°C, otherwise backlight may be blinking for a moment after turning on or not be able to turn on. The open voltage should be measured after ballast capacitor. If an inverter has shutdown function it should keep its open voltage for longer than 1 second even if lamp connector is open.

Note 4: Lamp frequency may produce interference with horizontal synchronous frequency and this may cause line flow on the display. Therefore lamp frequency shall be detached from the horizontal synchronous frequency and its harmonics as far as possible in order to avoid interference.

Note 5: Brightness ( $I_L = 6\text{mA}$ ) to be decrease to the 50% of the initial value.

Note 6: CN2 connector (backlight): BHSR-02VS-1 (JST)

Mating connector: SM02B-BHS-1-TB (JST)

| Pin no. | Symbol | Function                 | Remark  |
|---------|--------|--------------------------|---|
| 1       | H      | CCFL power supply (H.V.) | Cable color: Pink (central); Dark Gray others |
| 2       | L      | CCFL power supply (GND)  | Cable color: White                            |

### C. Optical specifications ( Note 1, Note 2 )

| Item                             | Symbol     | Condition           | Specification |       |       | Unit | Remark     |
|----------------------------------|------------|---------------------|---------------|-------|-------|------|------------|
|                                  |            |                     | Min.          | Typ.  | Max.  |      |            |
| Response time                    |            |                     |               |       |       |      |            |
| Rising time                      | Tr         | $\theta = 0^\circ$  | -             | 5     | 10    | ms   | Note 4     |
| Falling time                     | Tf         |                     | -             | 11    | 15    |      |            |

|                                  | Gy         |                     | 0.565         | 0.595 | 0.625 |      |            |
|                                  | Bx         |                     | 0.109         | 0.139 | 0.169 |      |            |
|                                  | By         |                     | 0.041         | 0.071 | 0.101 |      |            |
| Color Saturation (NTSC)          |            |                     |               | 75    |       | %    |            |
| White uniformity                 | $\delta_w$ |                     | 70            | -     | -     | %    | Note 3,8   |

Note 1: Ambient temperature = 25°C.

Note 2: To be measured in dark room after backlight warm up 30 minutes.

Note 3: To be measured with a viewing cone of 1° by Topcon luminance meter ELDIM EZContrast 160D.

Note 4: Definition of response time:

The output signals of BM-7 are measured when the input signals are changed from "Black" to "White" (falling time) and from "White" to "Black" (rising time), respectively. The response time interval between the 10% and 90% of amplitudes. Refer to figure as below.

Note 5. Definition of contrast ratio:

Contrast ratio is calculated with the following formula.

$$\text{Contrast ratio (CR)} = \frac{\text{Brightness on the "white" state}}{\text{Brightness on the "black" state}}$$

Note 6: Driving conditions for CCFL:  $I_L = 5.5 \text{ mA}$ , 52KHz Frequency.

Note 7: Definition of viewing angle:

Note 8: Definition of white uniformity:

White uniformity is calculated with the following formula.

Luminance are measured at the following nine points (1~13).

$$\delta_w = \frac{\text{Minimum Brightness of 13 points}}{\text{Maximum Brightness of 13 points}}$$

#### D. Reliability test items (Note 1)

| Test item                                  | Test Condition   | Remark       |
|--|--|--------------|
| High temperature storage                   | 60°C, 240Hrs   | Note 1, 2, 3 |
| Low temperature storage                    | -20°C, 240Hrs  | Note 1, 2, 3 |
| High temperature & high humidity operation | 40°C, 90%RH, 240Hrs<br>(No condensation)   | Note 1, 2, 3 |
| High temperature operation                 | 50°C, 240Hrs   | Note 1, 2, 3 |
| Low temperature operation                  | 0°C, 240Hrs  | Note 1, 2, 3 |
| Temperature cycling<br>(non-operation)     | -20°C ~ 60°C<br>1H, 10mins, 1H, 5cycles  | Note 1, 2, 3 |
| Electrostatic discharge<br>(non-operation) | 150 pF, 150 Ω, 10kV, 1 second, 9 position on the panel, 10 times each place                    | Note 3       |
| Vibration<br>(non-operation)               | Sweep: 1G, 10Hz ~ 500Hz ~ 10Hz / 2.5min<br>2 hours for each direction X, Y, Z (6 Hrs in total) | Note 1, 2, 3 |
| Mechanical shock<br>(non-operation)        | 50G/11ms, 200G/2ms, ±X, ±Y, ±Z<br>once for each direction                                      | Note 1, 2, 3 |

Note 1: Evaluation should be tested after storage at room temperature for one hour.

Note 2: There should be no change which might affect the practical display function when the display quality test is conducted under normal operating condition.

Note 3: Judgment: 1.Function OK.  
2.No serious image quality degradation.

### E. Display quality

The display quality of the color TFT-LCD module should be in compliance with the AUO's OQC inspection standard.

### F. Handling precaution

The Handling of the TFT-LCD should be in compliance with the AUO's handling principle standard.
